## FOREWORD

The data collection programs of the Department of Water Resources have been designed to supplement the activities of other agencies to satisfy specific needs of the State. Bulletin No. 130-74 presents useful, comprehensive, accurate, and timely hydrologic data which are prerequisites for monitoring environmental conditions as well as effective planning, design, construction, and operation of water facilities.

The Bulletin No. 130 series is published annually in five volumes. Each volume presents hydrologic data for one of five reporting areas of the State. These areas are delineated on the map to the left.

Ronald B. Robie, Director  
Department of Water Resources  
State of California

### METRIC CONVERSION TABLE

ENGLISH UNIT		EQUIVALENT METRIC UNIT
Inch (in)	2.54	Centimeters
Foot (ft)	0.3048	Meter
Mile (mi)	1.609	Kilometers
Acre	0.405	Hectare
Square mile (sq. mi.)	2.590	Square kilometer
U. S. gallon (gal)	3.785	Liters
Acre-foot (acre-ft)	1,233.5	Cubic meters
U. S. gallon per minute (gpm)	0.0631	Liters per second
Cubic feet per second (cfs)	1.699	Cubic meters per minute

#### ACKNOWLEDGMENTS

In the collection of data for this bulletin, the Department has been aided by various public and private agencies and by many private citizens. This cooperation is gratefully acknowledged, and it is specially fitting to commend the following agencies:

National Weather Service  
U. S. Bureau of Reclamation  
U. S. Army Corps of Engineers  
U. S. Geological Survey  
State Department of Health  
City and County of San Francisco  
City of Modesto  
Kern County Water Agency  
Kern County Canal and Water Company  
Buena Vista Water Storage District  
Modesto Irrigation District  
Turlock Irrigation District  
Oakdale Irrigation District  
Merced Irrigation District  
Fresno Irrigation District  
Kings River Water Association  
Central California Irrigation District  
Tule River Association  
Fresno County Health Department  
Kern County Health Department  
Tulare County Health Department  
Kern County Parks and Recreation Department

#### ABSTRACT

Report contains tables showing data on climate, surface water flow, ground water levels, and surface and ground water quality in the San Joaquin Valley for the 1973-74 water year. Figures show location of climatological, surface water, and surface water quality measurement stations; fluctuation of water levels in selected wells and areas; and electrical conductance at selected stations. Plates show lines of equal elevation of water in wells, spring 1974; profile of ground water levels; ground water areas; and well locations.

**APPENDIX A**  
**CLIMATOLOGICAL DATA**

## INTRODUCTION

This appendix summarizes monthly precipitation data in the San Joaquin Valley from July 1, 1973, to September 30, 1974, for stations which are not published by the National Weather Service. Also presented are annual precipitation values from 33 storage gages.

Figure A-1 shows the general location of all climatological observation stations in the San Joaquin Valley for which data are available in department files or files of the National Weather Service.

Table A-1 presents an explanation of column headings and code symbols used, and an index of climatological stations as shown on Figure A-1.

Table A-2 presents monthly precipitation data on 152 of the stations shown in the index.

Table A-3 presents storage gage precipitation data.

Precipitation data for stations shown in the index as still active and not published in this appendix are either published by the National Weather Service, or were not available at time of this publication.

Each station in this appendix has been assigned an identification number. The first two digits denote the drainage basin as shown below. The remaining digits denote the alphabetical sequence of the station.

### HYDROGRAPHIC AREA B

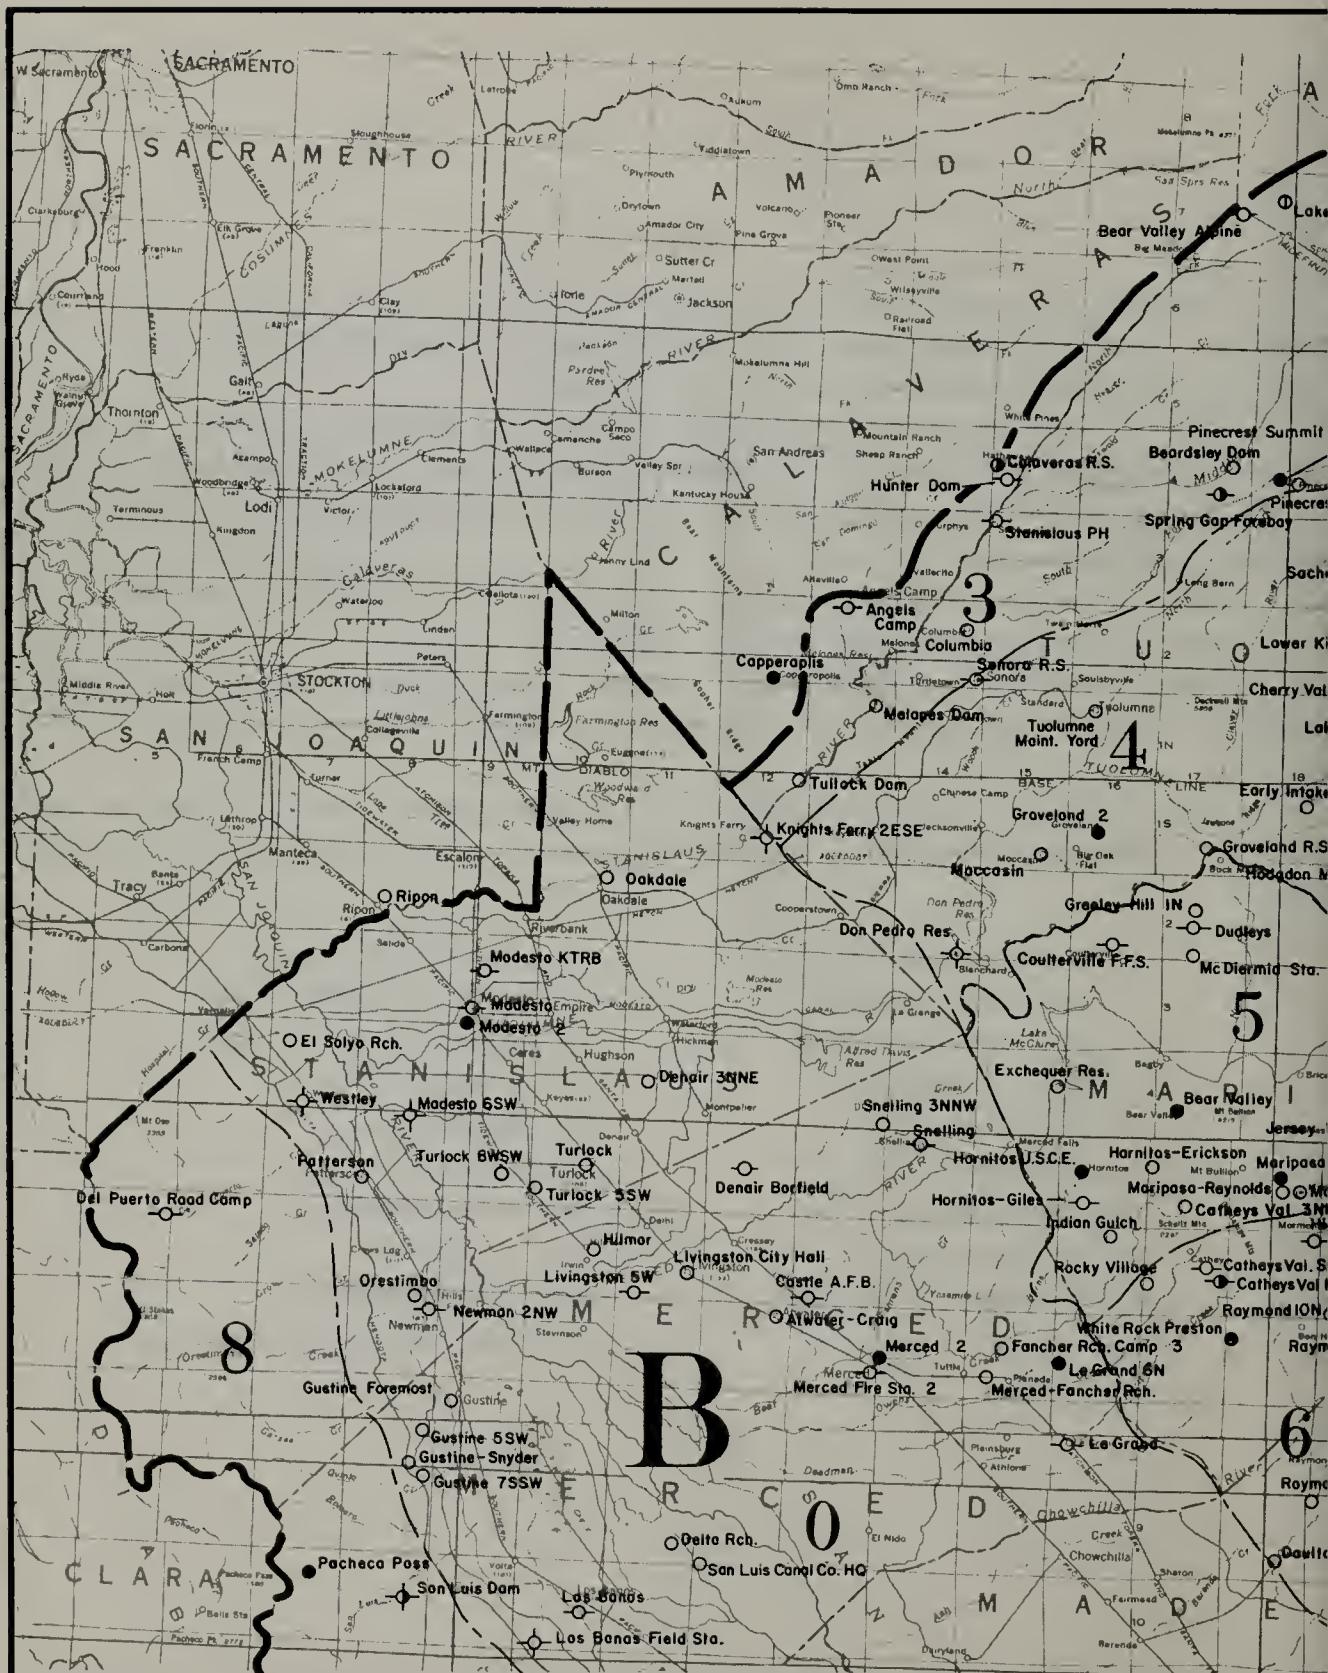

#### SAN JOAQUIN RIVER BASIN

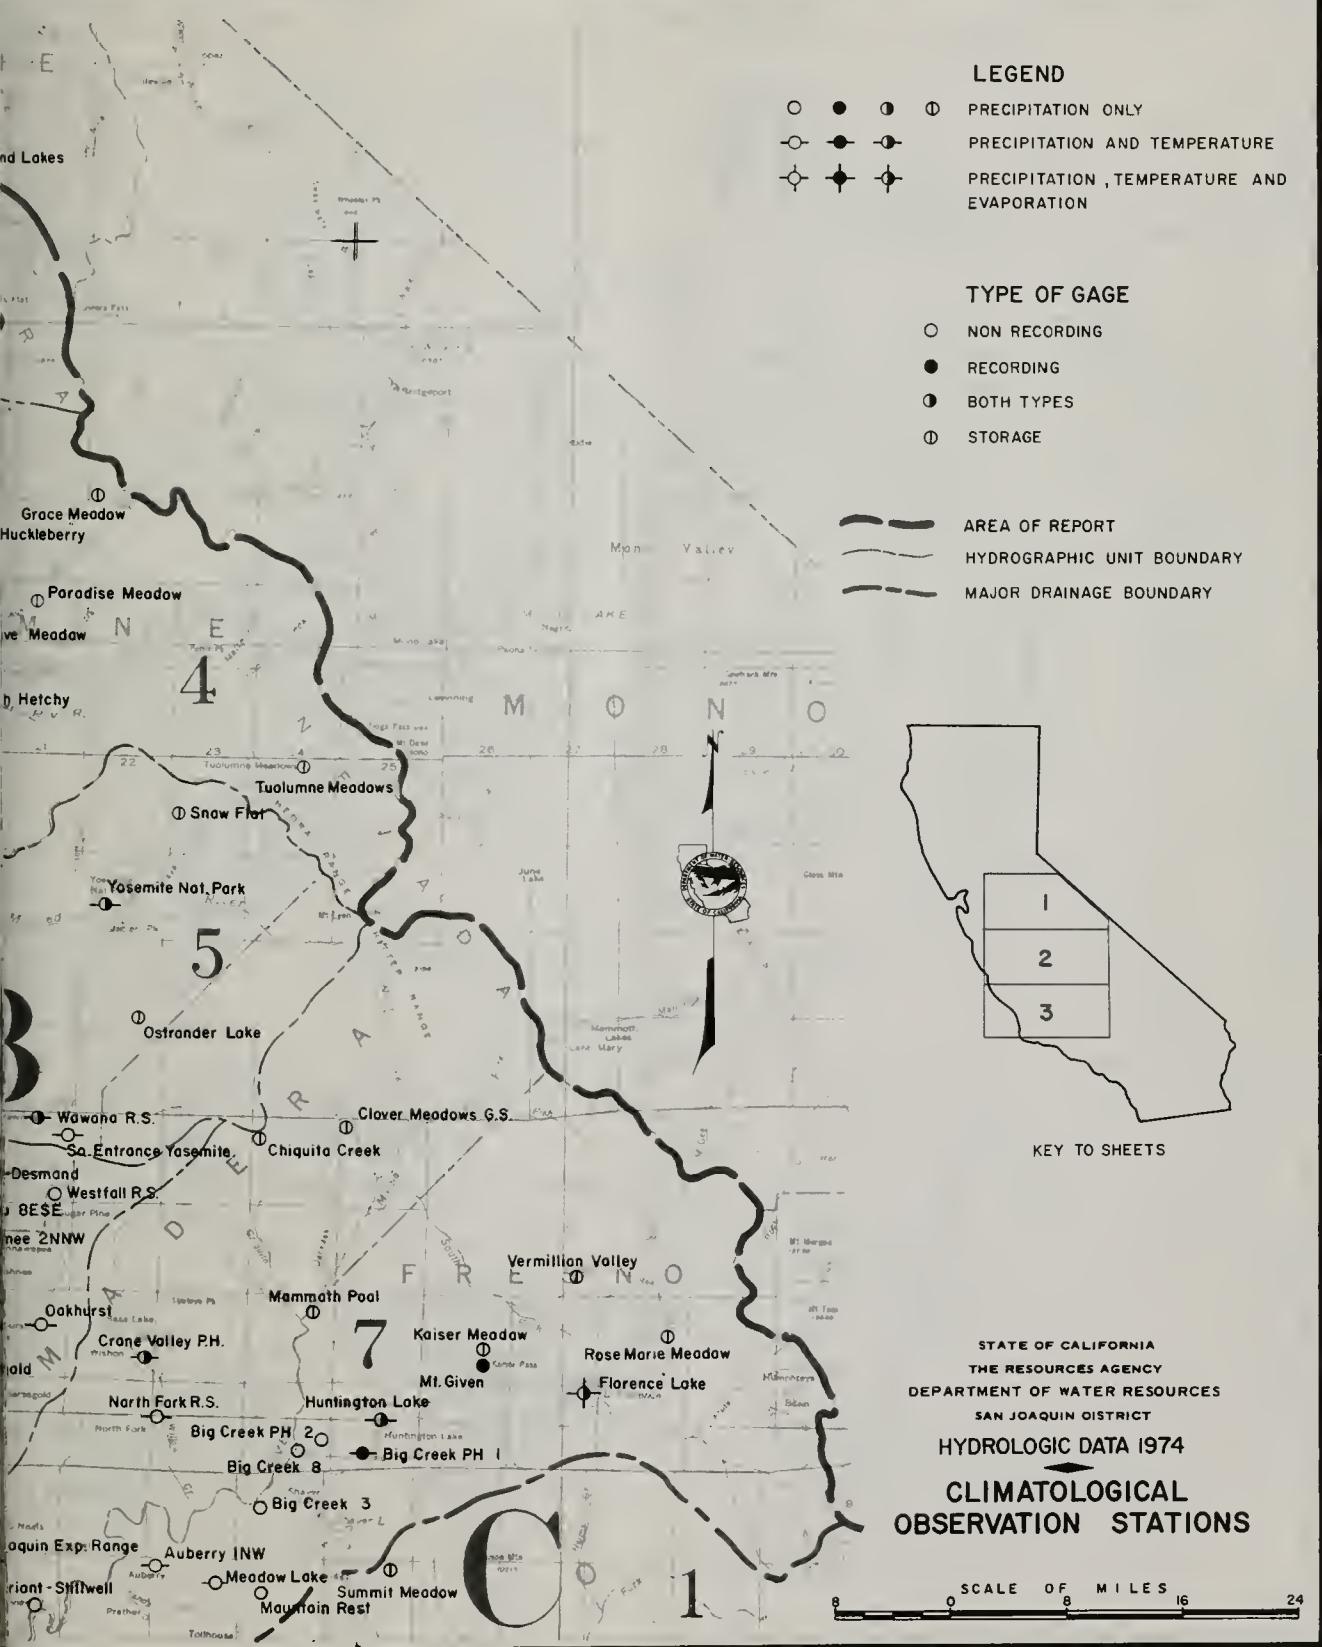

B0 - San Joaquin Valley Floor
B3 - Stanislaus River
B4 - Tuolumne River
B5 - Merced River
B6 - Fresno-Chowchilla Rivers
B7 - San Joaquin River
B8 - San Joaquin Valley on West Side

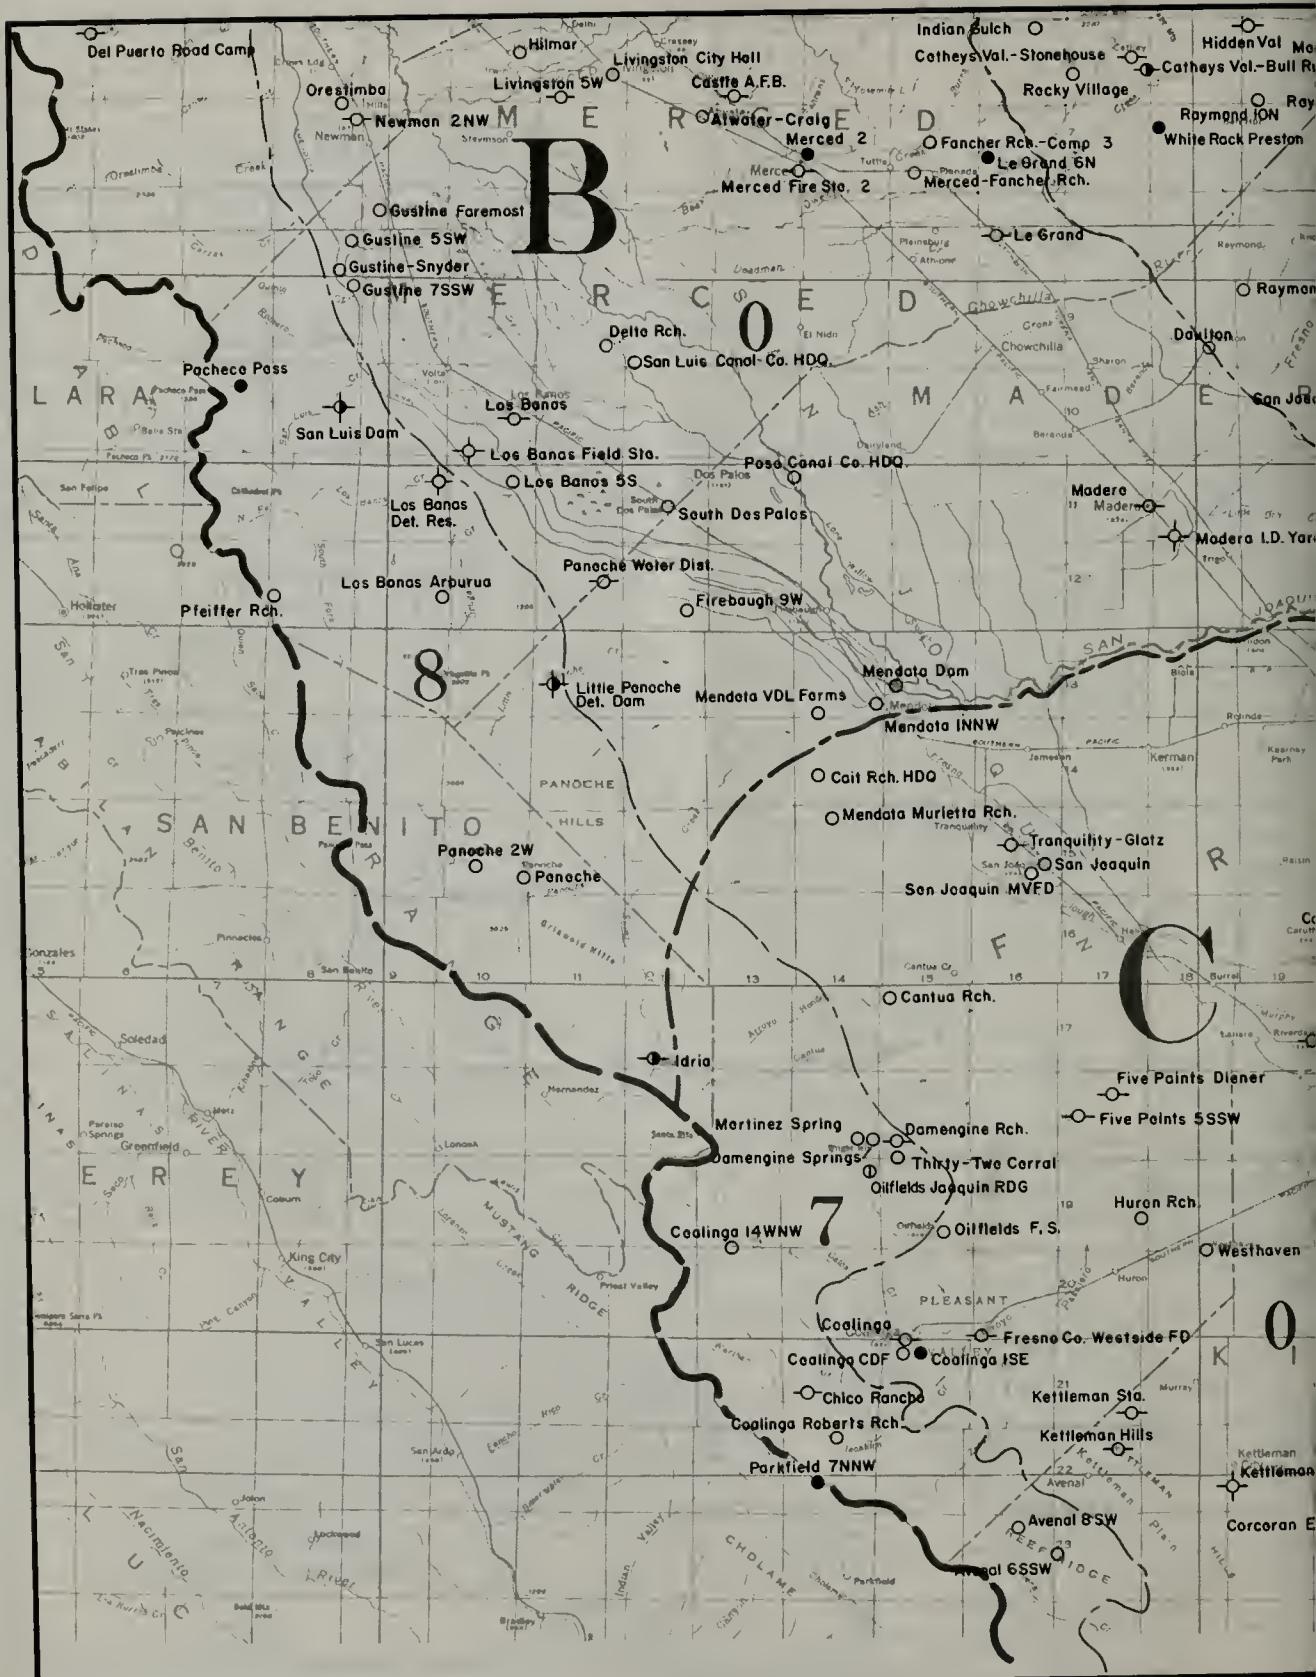

### HYDROGRAPHIC AREA C

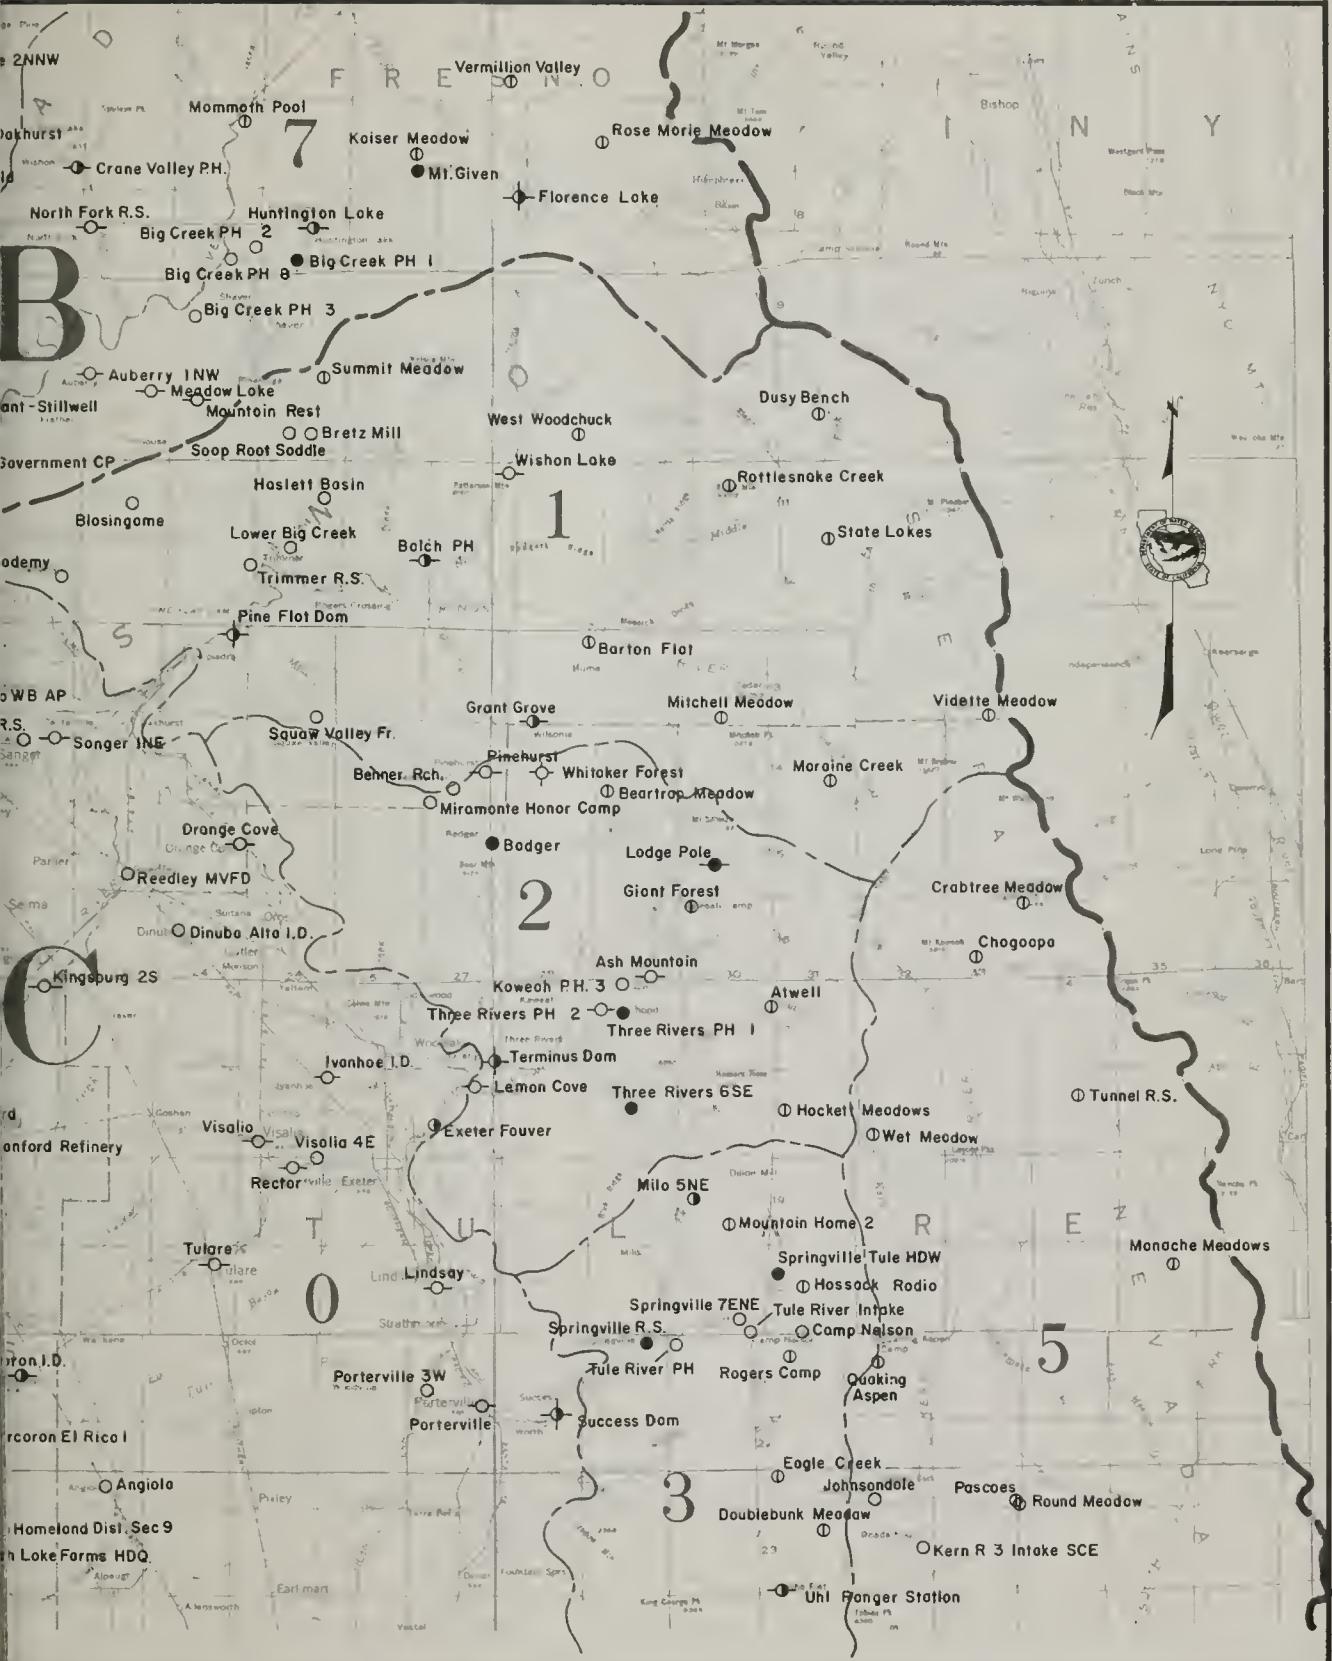

#### TULARE LAKE DRAINAGE BASIN

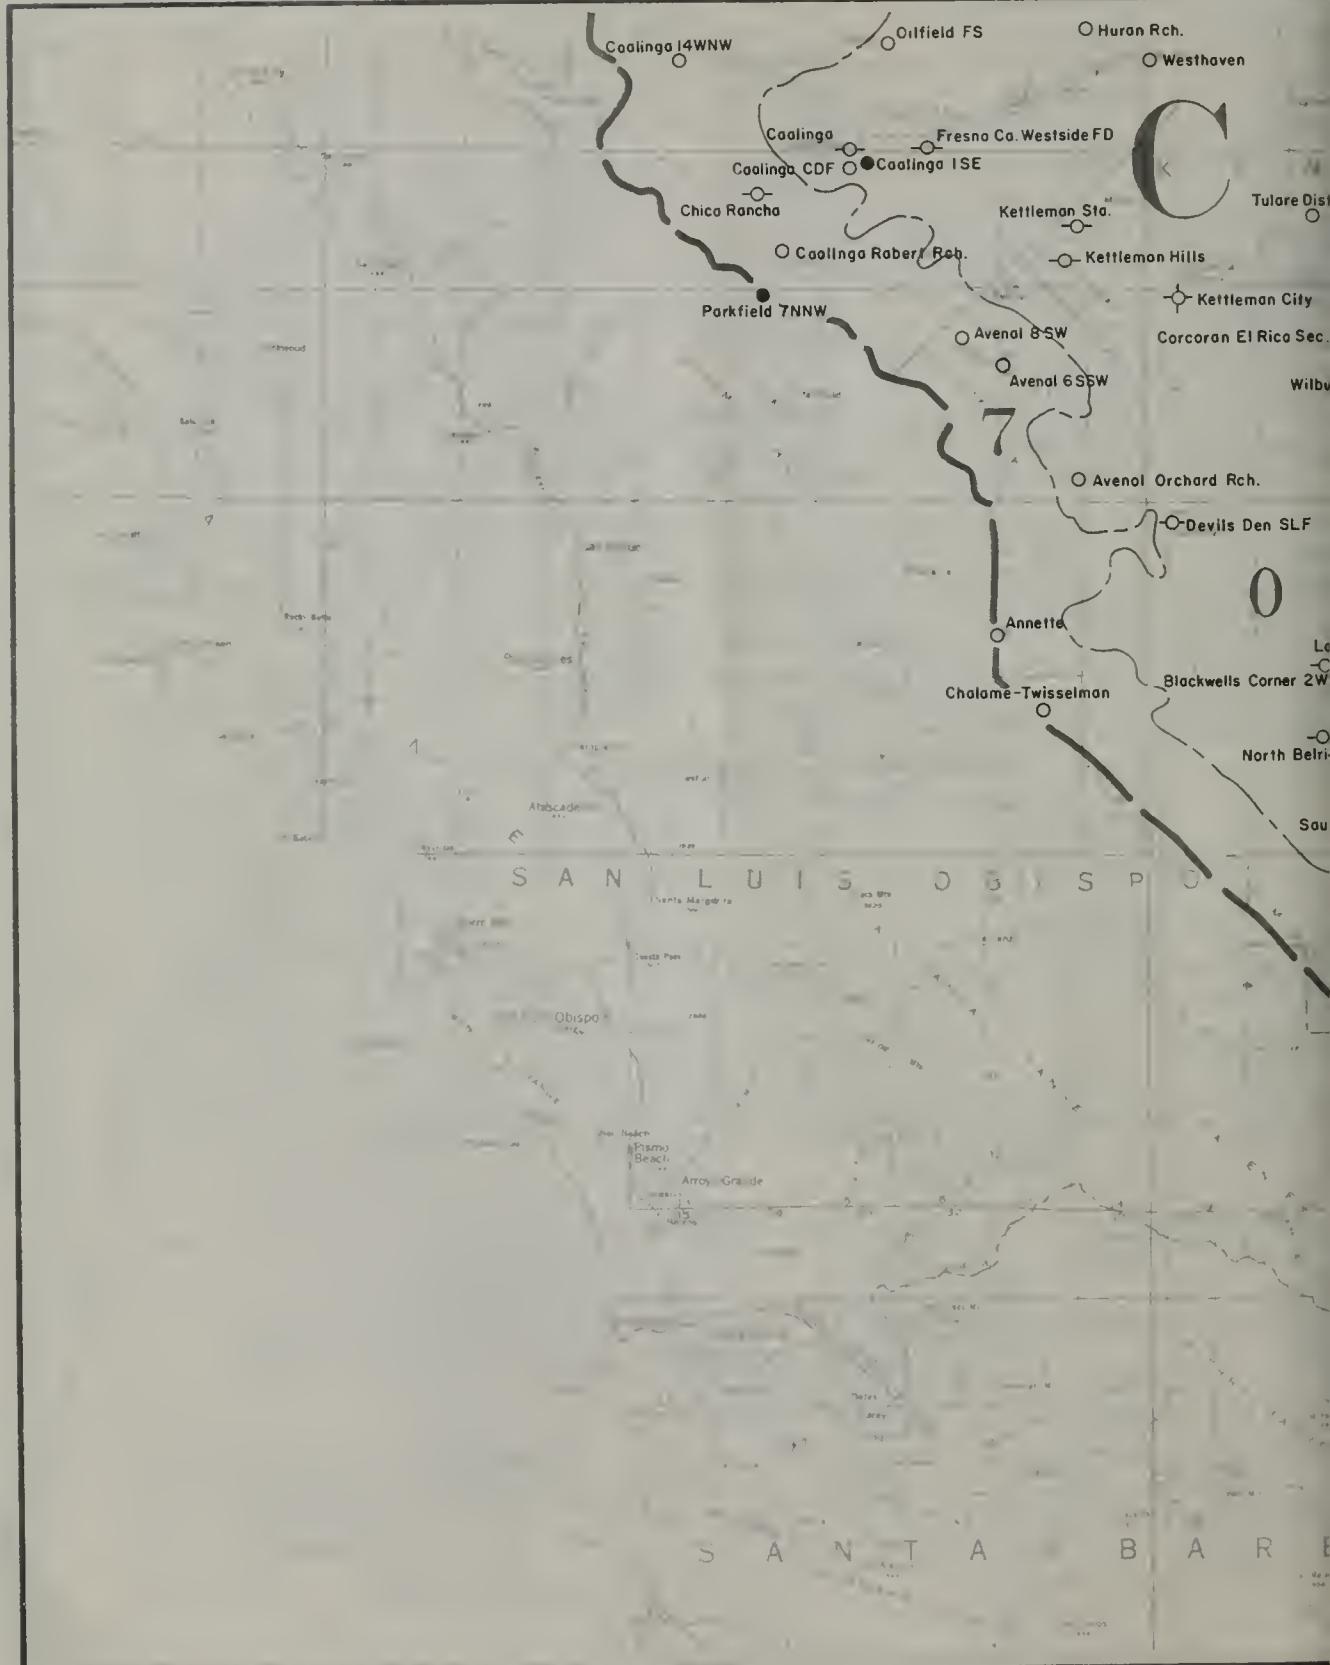

C0 - Tulare Lake Valley Floor
C1 - Kings River
C2 - Kaweah River
C3 - Tule River
C4 - Greenhorn Mountains
C5 - Kern River
C6 - Tehachapi Mountains
C7 - Tulare Lake Basin on West Side

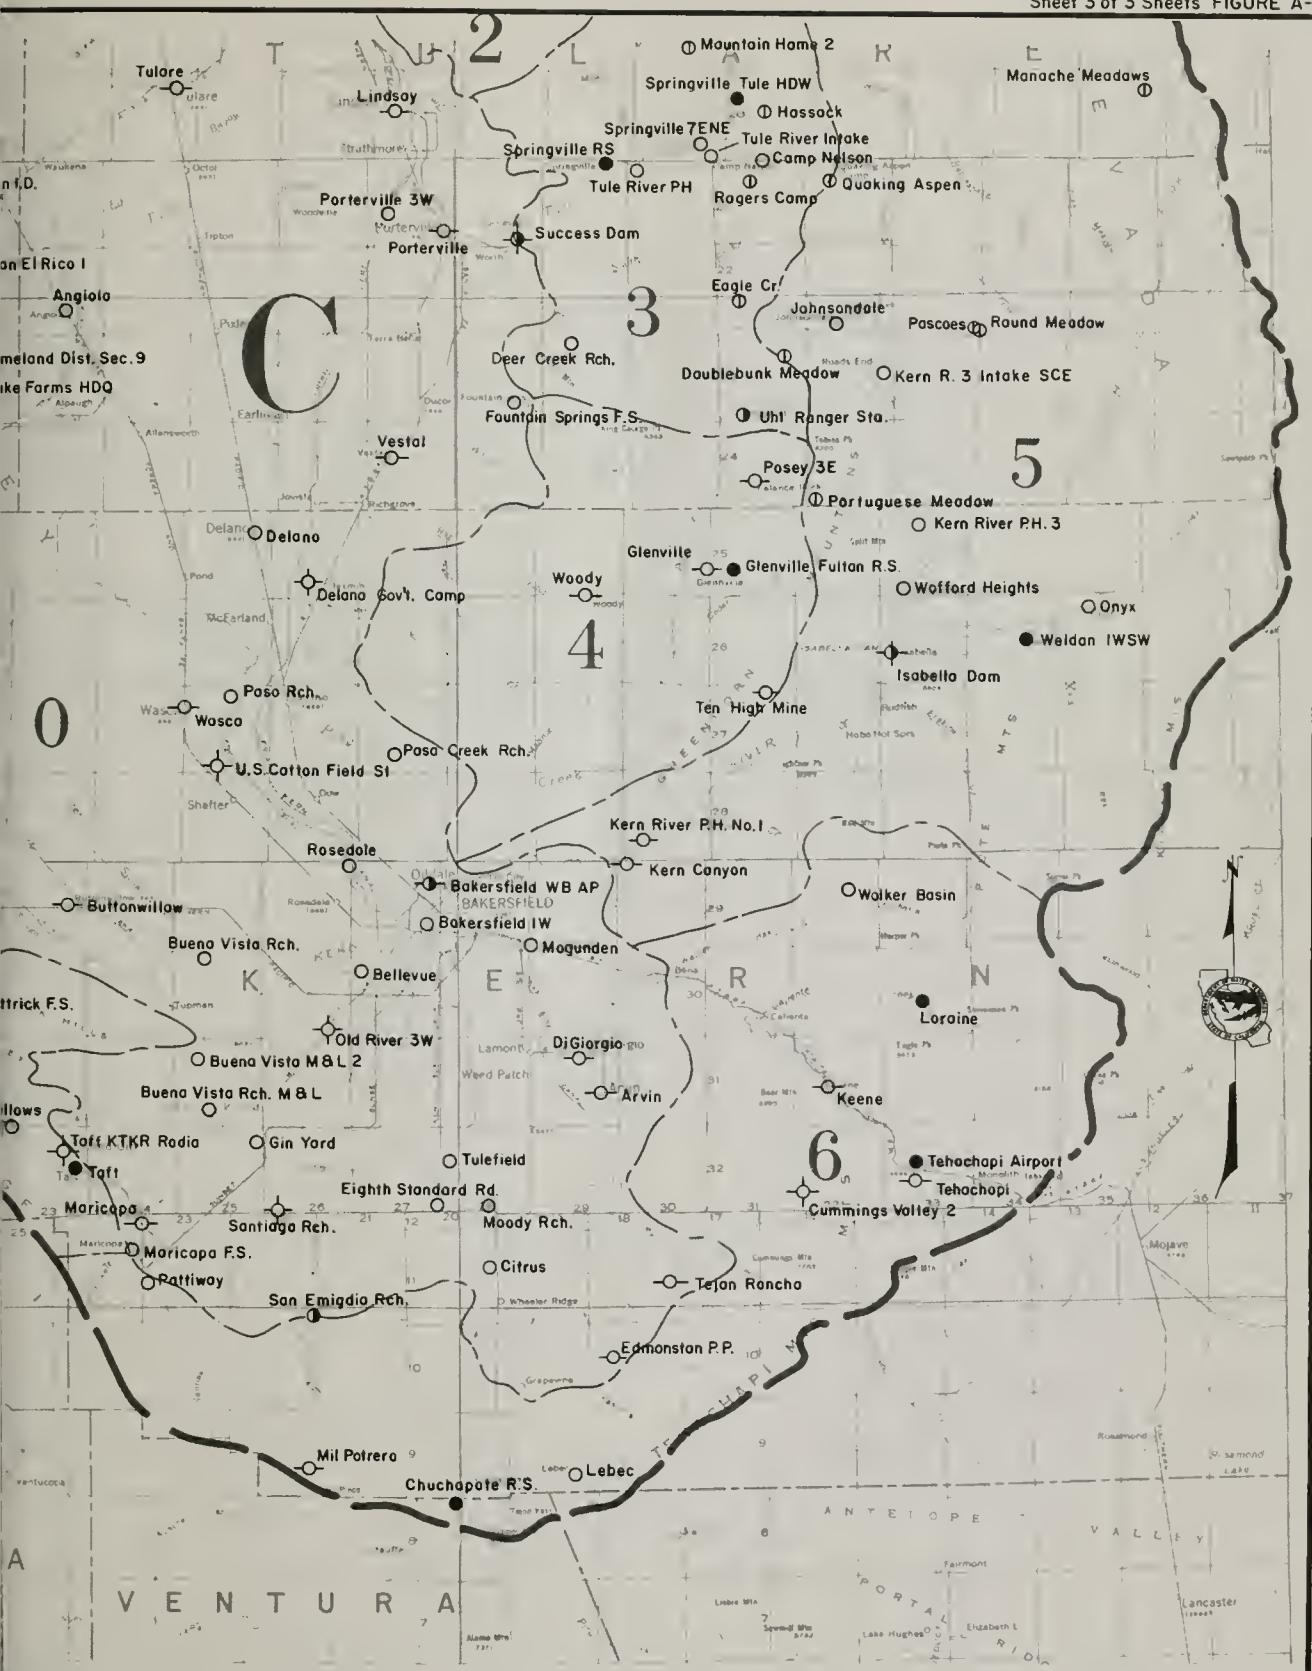

TABLE A-1  
INDEX OF CLIMATOLOGICAL STATIONS

An explanation of the column headings and code symbols used in connection with this table follows:

40-Acre Tract. This denotes the location of the station within the section in which it is located. The letter code is derived from the following diagram:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Base and Meridian. The code for this column is as follows:

- M - Mount Diablo Base and Meridian  
S - San Bernardino Base and Meridian

Cooperators' Numbers. These numbers are assigned from the following list:

- 000 - Private Cooperators
- 001 - 399 Private Agencies
  - 001 Kern County Land Company
  - 002 Boswell Company
  - 003 P. G. and E. Company
  - 004 Southern California Edison Company
  - 005 California Electric Power Company
  - 010 Amateur Radio Weather Network KTRB
  - 011 Southern Pacific Transportation Company
  - 012 Miller and Lux, Inc.
  - 013 Central California Irrigation District
- 400 - 799 Counties and municipalities
  - 401 Hetch Hetchy Water Supply
  - 404 Oakdale Irrigation District
  - 405 City of Los Angeles, Department of Water & Power
  - 420 Stanislaus County
- 800 - 899 State
  - 801 Pomology Department, University of California, Davis
  - 804 Division of Beaches and Parks
  - 805 State Department of Fish and Game
  - 806 Department of Water Resources
  - 808 Division of Forestry
  - 809 Division of Highways

### TABLE A-I (Cont.)

814	University of California, Davis, Westside Field Station
815	University of California, School of Forestry
900 - 999	Federal
900	National Weather Service
902	U. S. Air Force, Air Weather Service
903	U. S. Army Corps of Engineers
904	U. S. Bureau of Reclamation
905	U. S. Forest Service
906	U. S. Department of Agriculture, Agricultural Research Service
907	National Weather Service (State Climatologist)
916	U. S. Geological Survey

Cooperators' (Coop) Index Numbers. These are the numbers assigned to the stations by the agencies responsible for handling the station records. With few exceptions, the alpha order numbers assigned to the National Weather Service stations are the same as those used by the National Weather Service. The National Weather Service station number is shown in this column only when it differs from the alpha order number.

Record Began. This is shown to year only.

Record Ended. If record continues this column is left blank.

Years Missing. This denotes missing record to the nearest full year.

County Code. Numbers used to designate specific counties are listed below:

Alpine	02
Calaveras	05
Fresno	10
Inyo	14
Kern	15
Kings	16
Madera	20
Mariposa	22
Merced	24
San Benito	35
San Joaquin	39
San Luis Obispo	'40
Stanislaus	50
Tulare	54
Tuolumne	55
Ventura	56

TABLE A-2  
PRECIPITATION DATA

The definition of terms and abbreviations used in this table follows:

- E Wholly or partially estimated.
- T Trace, an amount too small to measure.
- NR Data not received before publication.
- RB Record begins.
- RE Record ends.
- INC Incomplete data.

Precipitation values are shown to the nearest hundredth (.01) of an inch, except where Fisher & Porter recording rain gages are used; these values are shown to the nearest tenth (.1) of an inch.

APPENDIX B  
SURFACE WATER MEASUREMENTS

#### INTRODUCTION

This appendix presents surface water data for the 1974 water year, which is from October 1, 1973 to September 30, 1974. The data presented consist of daily mean discharge, daily mean gage height, gaging station location, diversion quantities, imported water to report area, exported water from report area, summary tables of monthly and annual unimpaired runoff from major streams, and corrections and revisions to previously published reports.\*

Each station in this appendix has been assigned an identification number. The first two digits denote the drainage basin as shown below. The remaining digits further identify each station.

HYDROGRAPHIC AREA B		HYDROGRAPHIC AREA C	
SAN JOAQUIN RIVER BASIN		TULARE LAKE DRAINAGE BASIN	
B0 - San Joaquin Valley Floor		C0 - Tulare Lake Valley Floor	
B3 - Stanislaus River		C1 - Kings River	
B4 - Tuolumne River		C2 - Kaweah River	
B5 - Merced River		C3 - Tule River	
B6 - Fresno-Chowchilla Rivers		C4 - Greenhorn Mountains	
B7 - San Joaquin River		C5 - Kern River	
B8 - San Joaquin Valley on West Side		C6 - Tehachapi Mountains	
		C7 - Tulare Lake Basin on West Side	

In addition to data collected and published by the Department of Water Resources in this appendix, the U. S. Geological Survey collects and publishes data on many additional gaging stations for the same report area. This work is done under a federal-state cooperative contract, or through cooperative arrangements with other local or government agencies. The data published in the following reports together with this report present a comprehensive analysis of the water resources for the area:

1. Water Resources Data for California  
Part 1, Surface Water Records  
Volume 2: Northern Great Basin and Central Valley  
United States Department of the Interior  
Geological Survey  
Prepared in cooperation with the California Department of Water Resources  
and with other agencies.
2. Kings River Watermaster Report  
Kings River Water Association
3. Water Supply  
Fresno Field Division, U. S. Bureau of Reclamation
4. Bulletin 120, Summary of Water Conditions in California,  
Department of Water Resources
5. Bulletin 157, Index of Stream Gaging Stations In and Adjacent to California, 1970  
Department of Water Resources  
This index contains the period of record--with number of years missing--and more information for 800<sup>†</sup> stations in the San Joaquin Valley area. The index also identifies the agency from which a particular record may be obtained.

\*Figure B-1 shows station locations

## ALPHABETICAL INDEX TO TABLES

## DAILY MEAN DISCHARGE, DAILY MEAN GAGE HEIGHT

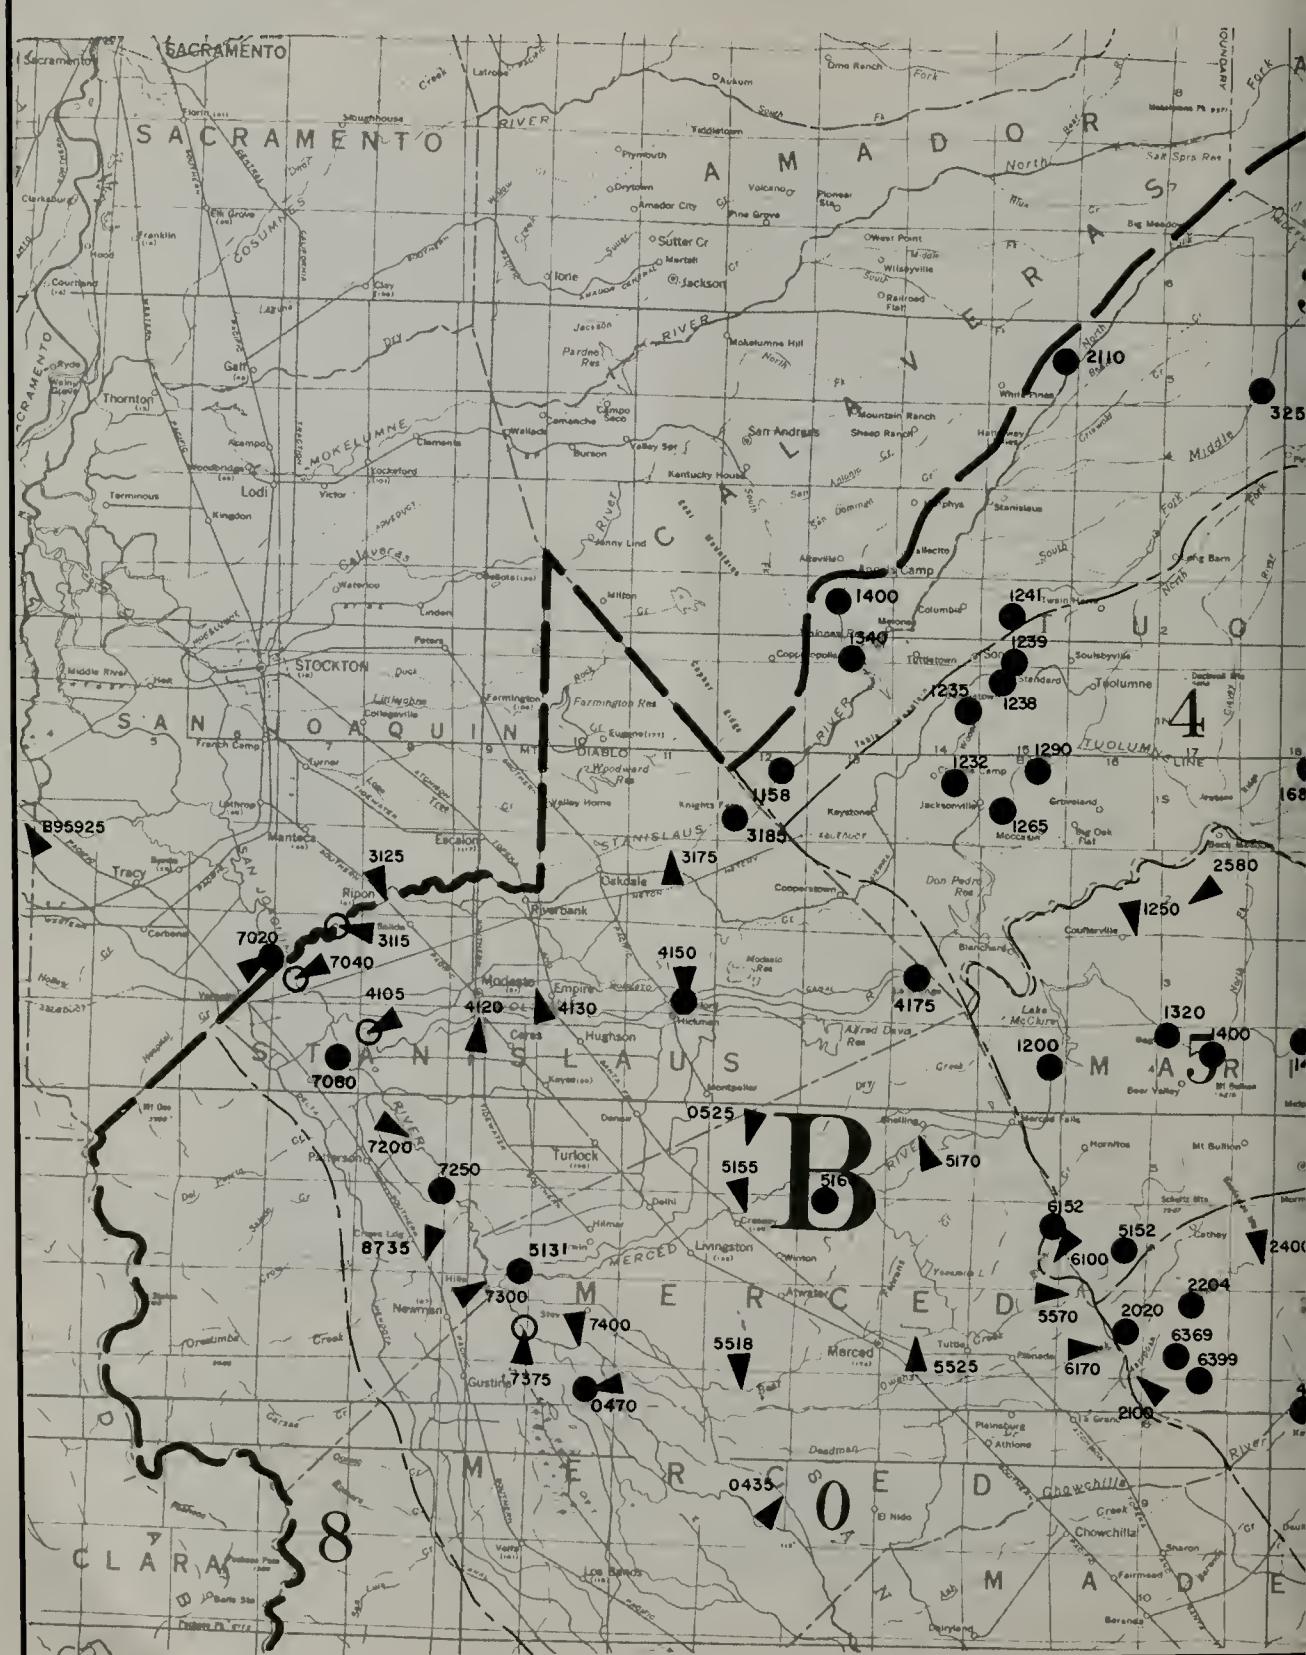

Page

	Daily Mean Discharge	Daily Mean Gage Height
Bean Creek near Coulterville . . . . .	60	
Bear Creek below Bear Reservoir . . . . .	53	
at McKee Road near Merced . . . . .	54	
at Merced Irrigation District West Boundary . . . . .	55	
Buena Vista Creek near Taft . . . . .	91	
Burns Creek below Burns Reservoir . . . . .	56	
Campbell-Moreland Ditch above Porterville . . . . .	82	
Chowchilla River, West Fork near Mariposa . . . . .	48	
Cross Creek below Lakeland Canal #2 . . . . .	78	
Delta-Mendota Canal near Tracy . . . . .	40	
to Mendota Pool . . . . .	41	
Dry Creek near Modesto . . . . .	69	
Eastside Bypass near El Nido . . . . .	49	
Fresno River Eight Miles West of Madera . . . . .	47	
Lewis Fork near Oakhurst . . . . .	44	
Friant-Kern Canal Delivery to Porter Slough . . . . .	79	
to Tule River . . . . .	80	
Hubbs-Miner Ditch at Porterville . . . . .	87	
James Bypass near San Joaquin . . . . .	39	
Kern River at Second Point . . . . .	90	
near Bakersfield . . . . .	89	
Kings River, South Fork, below Empire Weir #2 . . . . .	77	
Mariposa Creek near Catheys Valley . . . . .	50	
below Mariposa Reservoir . . . . .	51	
Maxwell Creek at Coulterville . . . . .	61	
Merced River at Cressey . . . . .	64	
below Snelling . . . . .	63	
Miami Creek at Highway 49 near Ahwahnee . . . . .	46	
near Oakhurst . . . . .	45	
Musick Creek #1 near Shaver Lake . . . . .	76	
Musick Creek #2 near Shaver Lake . . . . .	75	
Mustang Creek near Ballico . . . . .	65	
Orestimba Creek below Highway 33 . . . . .	66	
Owens Creek below Owens Reservoir . . . . .	52	
Panoche Drain near Dos Palos . . . . .	58	
Poplar Ditch near Porterville . . . . .	86	
Porter Slough at Porterville . . . . .	83	
Porter Slough Ditch at Porterville . . . . .	84	
Salt Slough near Stevinson . . . . .	59	
San Joaquin River near Dos Palos . . . . .	43	
at Fremont Ford Bridge . . . . .	62	103
below Friant . . . . .	38	101
at Maze Road Bridge . . . . .	71	112
near Mendota . . . . .	42	
near Newman . . . . .	67	106
at Patterson Bridge . . . . .	57	107
near Stevinson . . . . .	74	102
near Vernalis . . . . .	73	115
Stanislaus River at Koetitz Ranch . . . . .	72	113
at Orange Blossom Bridge . . . . .	72	114
at Ripon . . . . .	81	100
Tulare Lake . . . . .	68	108
Tule River below Porterville . . . . .	70	110
Tuolumne River at Hickman Bridge . . . . .	85	111
at Modesto . . . . .	88	
at Tuolumne City . . . . .		
Vandalia Ditch near Porterville . . . . .		
Woods-Central Ditch near Porterville . . . . .		
 DIVERSIONS

### UNIMPAIRED RUNOFF

Unimpaired runoff is defined as the flow that occurs naturally at a point in a stream if there were: (1) no upstream controls such as dams or reservoirs; (2) no artificial diversions or accretions; and, (3) no change in ground water storage resulting from development. The computed natural or unimpaired runoff values are considered to be the flows that would occur if no impairments were upstream from the measurement points.

Table B-1 presents annual unimpaired runoff in percent of average for major streams.

Table B-2 presents monthly unimpaired runoff in percent of average for major streams.

The average unimpaired runoff is in thousands of acre-feet and was computed from the 50-year period October 1920 through September 1970.

TABLE B-1

- (a) Average unimpaired runoff in thousands of acre-feet computed from the 50-year period October 1920 through September 1970.
- (b) Figures were computed from summations of unimpaired runoff at foothill stations on major tributaries only and do not include runoff from minor tributaries and from valley floor.
- (c) Percent figures are preliminary values and subject to revision.

(a) Percent figures are preliminary values and subject to revision. Average unimpaired runoff in thousands of acre-feet computed from the 50-year period October 1920 through September 1970.

(b) Figures were computed from summations of unimpaired runoff at foothill stations on major tributaries only and do not include runoff from minor tributaries and from the valley floor.

#### DAILY MEAN DISCHARGE

The streamflow data shown in Table B-3 are arranged, for each stream or stream system, in downstream order. Stations on a tributary entering between two main stem stations are listed between those stations, and in downstream order on that tributary. A stream gaging station is named after the stream and the nearest post office (Merced River at Cressey) or well-known landmark (San Joaquin River at Fremont Ford Bridge).

The discharges estimated for periods of no record or invalid record, are shown with the letter "E". Also, qualified by the letter "E" are discharges obtained from extended ratings which exceed 140 percent of the highest measured flow-rate on which the rating curve was based.

The discharge figures in this table have been rounded off as follows:

##### 1. Daily flows - second-feet

0.0	- 9.9	nearest	Tenth
10	- 999	"	Unit
1,000	- 9,999	"	Ten
10,000	- 99,999	"	Hundred
100,000	- 999,999	"	Thousand

##### 2. Monthly means - second-feet

0.0	- 99.9	nearest	Tenth
100	- 9,999	"	Unit
10,000	- 99,999	"	Ten
100,000	- 999,999	"	Hundred

##### 3. Monthly and yearly totals - acre-feet

0.0	- 9,999	nearest	Unit
10,000	- 99,999	"	Ten
100,000	- 999,999	"	Hundred
1,000,000	- 9,999,999	"	Thousand

Those streamflow data received from cooperating agencies are published as received and do not necessarily adhere to the above criteria.

Station located 2 miles downstream from Friant Dam and 1.5 miles downstream from Cottonwood Creek. Flow regulated by Millerton Lake beginning in 1944, and by other upstream reservoirs. Records furnished by U. S. Geological Survey. Drainage area is 1,675 square miles.

a Maximum flows since construction of Friant Dam in 1944.

Station located 0.1 mile downstream from Placer Avenue, 3.1 miles north of City of San Joaquin. James Bypass carries diverted flow from Kings River to San Joaquin River. Flow regulated by upstream reservoir, weir, and diversions. Altitude of gage is 165 feet (from U. S. Geological Survey topographic map). This station was established in 1929 and maintained until 1947 by Kings River Water Association. The U. S. Geological Survey maintained it and published the data until 1953. The U. S. Bureau of Reclamation has maintained the station from that time and records for the period 1953 through 1974 are available from their office in Sacramento. Records since 1969 have been published in the Bulletin No. 130 series of reports.

Station located at Tracy Pumping Plant at intake to canal, 6 miles southeast of Byron, 10 miles northwest of Tracy. Discharge computed from records of operation of pumps. Water is diverted from Sacramento-San Joaquin Delta by way of Old River and a dredged channel to the Tracy Pumping Plant where it is lifted about 200 feet into canal. Records furnished by U. S. Bureau of Reclamation.

Station located 2.5 miles downstream from Mendota Dam, 4 miles north of Mendota. Records furnished by U. S. Bureau of Reclamation. Drainage area is 3,943 square miles. This station is equipped with DWR radio telemeter. Flow regulated by upstream reservoirs. Summer flows consist mainly of Delta-Mendota Canal water regulated through Mendota Dam for downstream diversions.

a Maximum discharge of record prior to the construction of Friant Dam in 1944.

Station located 50 feet downstream from McKee Road Bridge, one mile east of Merced. Tributary to San Joaquin River via Eastside Bypass. Flow regulated by Bear and Burns Reservoirs. Records furnished by the U. S. Corps of Engineers. Altitude of gage is 189 feet (from topographic map). Drainage area is 190 square miles. In December 1955, prior to installation of this station, a gage height of 22.9 feet was taken from a high water mark and the discharge was estimated as 9,500 cfs. Station installed in 1956; however, prior to 1969 records were not requested for publication by Department of Water Resources. Prior records available at U. S. Corps of Engineers office, Sacramento.

Station located 30 feet below Fremont Ford Bridge, 4.5 miles west of Stevenson, 6.7 miles upstream from the Merced River. Drainage area is approximately 8,090 square miles. Flow records were published in U. S. Geological Survey report "Surface Water Records of California" prior to 1972.

a During periods of high flow some water bypasses the station through three overflow channels known as North, Middle, and South Mud Sloughs.

Station located 1.0 mile south of intersection of Crows Landing Road and Highway 33 and is 400 feet east of highway. During the summer months the flows are irrigation drainage. Records are available for a station located 0.6 mile upstream operated by USBR 1948 to 1959. Also, records are available for a station located 4.5 miles downstream operated by the Department of Water Resources 1957 to 1972. Maximum discharge of record on 2-1-63 estimated as 2,650 cfs at gage height 12.08 by extending the rating curve above 1,654 cfs.

Station located at highway bridge, 3.35 miles above mouth. Backwater at times, from the San Joaquin River, affects the stage-discharge relationship. Drainage area is 1,896 square miles. Flows regulated by upstream reservoirs and diversions.

a Reflects present datum.

b Maximum discharge since Department of Water Resources began operation of station in April 1966.

Station located at State Highway 132 Bridge, 13 miles west of Modesto, two miles upstream from mouth of the Stanislaus River. Gage height-discharge relation affected by backwater from the Stanislaus River during high flows in the Stanislaus. Flows regulated by upstream reservoirs and diversions. Drainage area is 12,400 square miles.

a This maximum gage height of record does not represent the maximum discharge of record as the station was affected by backwater from the Stanislaus River.

Station located on left bank 9.35 miles upstream from mouth, 0.6 mile northwest of Bacon and Gates Junction, 3.7 miles southwest of Ripon. It is possible that backwater from San Joaquin River could affect the stage-discharge relationship. Flow regulated by upstream reservoirs and diversions. Drainage area is 1,094 square miles.

a Water bypasses station by overflowing flood plain on right bank and discharge is not computed.  
Overflowing occurs at approximately 45 feet gage height.

Station located on left bank 20 feet downstream from the Durham Ferry Highway Bridge, 3 miles downstream from the Stanislaus River 3.4 miles northeast of Vernalis. Drainage area is approximately 13,540 square miles. Natural flow of stream affected by storage reservoirs, power developments, ground water withdrawals and diversions for irrigation. Low flows consist mainly of return flow from irrigation. This station is operated under the Federal-State Cooperative Program. Equipped with DWR radio telemeter. The records are furnished by the U. S. Geological Survey.

a Reflects present datum. The gage height of 32.81 feet does not represent the maximum discharge of 79,000 cfs. as water was bypassing the station through levee breaks upstream from station.

Station located 4.0 miles south of Shaver Lake on Highway 168 and 1.5 miles west on private road. Station operated under contract. Due to the importance of extreme low flows to contractor, the Department of Water Resources criteria of rounding values were not adhered to. Drainage area is 1.3 square miles.

Station located downstream from Cross Creek Weir, 4 miles east of Guernsey. Tributary to Tulare Lake area. At times the flow is a combination of water from Kaweah River, Kings River, and Cottonwood Creek. Records are computed by the use of weir measurements taken at daily intervals and are furnished by the Corcoran Irrigation District.

Station located 330 feet upstream from Rockford Road Bridge, 5.1 miles west of Porterville. Flows regulated by Success Reservoir and spill from Friant-Kern Canal. Altitude of gage is approximately 400 feet (from U. S. Geological Survey topographic map). Flows include Central Valley Project releases from Friant-Kern Canal to Tule River. Records furnished by the Tule River Association and reviewed by the Department of Water Resources.

Station located 4.5 miles west of Porterville, approximately 100 feet downstream from head. This is regulated diversion from Tule River. This station is operated under cooperative agreement between the Department of Water Resources and the Tule River Association. Records furnished by the Tule River Association and reviewed by the Department of Water Resources. This station is sometimes affected by backwater due to CVP water being delivered from the Friant-Kern Canal to Woods-Central Ditch approximately 100 feet downstream from station.

Station located at State Highway 119 bridge immediately southwest of Valley Acres, 5.7 miles northeast of Taft. Tributary to Buena Vista Lake. Recorder installed 11-10-64. Altitude of gage is approximately 425 feet (from topographic map).											

## DIVERSIONS

Diversion data formerly collected by the Department of Water Resources for the Stanislaus, Tuolumne, Merced, and San Joaquin Rivers and Dry Creek near Modesto have been discontinued. The last publication of such diversion data was in Bulletin 130-70.

The diversion data shown in Tables B-4 through B-8 have been furnished by the U. S. Bureau of Reclamation, City and County of San Francisco, local agencies including irrigation and water districts, and the Department's Division of Operations and Maintenance. Figures shown are monthly and annual acre-feet amounts of water diverted from the San Joaquin River, deliveries from project canals, deliveries to irrigation districts, and imports to and exports from the San Joaquin Valley.

The diversion data are published as received without rounding according to criteria normally used by the Department.

Records for this reach furnished by the U. S. Bureau of Reclamation and the Contracting Entities, and do not include operational spill. Acre-feet values are published as received and not rounded to the criteria used by the Department of Water Resources.

- \* Includes purchased and transferred water.
- \*\* Includes filling of San Luis Drain -- not charged to District as follows: October, 68 acre-feet; November, 122 acre-feet.
- a. Total does not include Central California Irrigation District deliveries from the Delta-Mendota Canal.
- b. Plant is located on Fresno Slough which diverts from the San Joaquin River at mile 209.0 L. Distance from the San Joaquin River and bank of slough on which diversion is located are shown in parentheses.
- c. Plant is located on James Bypass which diverts from Fresno Slough at mile 11.80 R. Distance from Fresno Slough and bank locations of diversions are shown in parentheses.

- d. One 6-inch pump located on arm of slough at SW corner of S. 12, T. 14S, R. 15E.
- e. One 8-inch pump located on arm of slough 1400 feet S. of NE corner, S. 24, T. 14S, R. 15E.
- f. One 8-inch pump located on arm of slough adjacent to M. Beck.
- g. Total does not include deliveries under separate agreement by San Luis Water District.

a Data for Madera and Friant-Kern Canals furnished by U. S. Bureau of Reclamation. All other data furnished by individual irrigation districts and published as received.  
b An additional 63,916 acre-feet of water was pumped from wells.  
c Of this acreage, 2,722 were double-cropped. Does not include an undetermined amount of riparian water users acreage.  
d An additional 148,332 acre-feet of water was pumped from wells.  
e Of this acreage, 36,535 were double cropped.  
f An additional 19,550 acre-feet of water was pumped from wells.  
g Of this acreage, 9,000 were double cropped.

h An additional 639 acre-feet of water was pumped from wells.  
i Of this acreage, 483 were double cropped.  
j Of this acreage, 860 were double cropped.  
k Of this acreage, 590 were double cropped.  
m This acreage also received 32,618 acre-feet of water from wells and controlled drainage.  
n This acreage also received an undetermined amount of well water, and an undetermined amount of controlled drainage water from Oakdale Irrigation District. Of this acreage, 5,285 were double cropped.

Data for Delta-Mendota Canal furnished by U. S. Bureau of Reclamation. Data for Tuolumne River exports furnished by City and County of San Francisco. Data for California Aqueduct furnished by Department of Water Resources, Division of Operations and Maintenance. Acre-feet values are published as received and not rounded to the criteria normally used by the Department of Water Resources.

(a) Water pumped at Delta Pumping Plant less deliveries to South Bay Aqueduct, Oak Flat Water District, and Tracy Golf and Country Club.

(b) Exports from Tuolumne River.

(c) Deliveries to Southern California.

## DAILY MEAN GAGE HEIGHTS

Presented in Table B-9 are records of daily mean gage heights for key stations on major streams in the San Joaquin Valley for the 1973-74 water year.

At the bottom of the stage tables are shown the major river crests occurring for the 1973-74 water year. The table also shows the location of the station, maximum gage height of record, period of record, and datum of gage. The elevation of water surface at the gaging station is obtained by adding the gage height reading to the elevation of the gage datum presented in each table. Gage height for stage tables is computed from recorder charts and is reported to one-hundredth of a foot.

Station located 2.2 miles southwest of Chatom Ranch, 6 miles southwest of Corcoran on south end of El Rico Bridge. Tulare Lake receives water from Kings, Kaweah, and Tule Rivers during high-water periods and occasionally from Kern River, Deer Creek, and several small intermittent streams. Elevation at lowest point of lake bed is now about 175 feet, U. S. Geological Survey datum. Records furnished by Tulare Lake Basin Water Storage District and the Boswell Company.

Station located 300 feet downstream from bridge on Hills Ferry Road, 500 feet downstream from the Merced River, 3.5 miles northeast of Newman. Records furnished by U. S. Geological Survey. Drainage area is 9,520 square miles. This station equipped with DWR radio telemeter. Flow records are published in the U. S. Geological Survey report "Surface Water Records of California". Flows regulated by upstream reservoirs and diversions.

a During periods of high flow the Merced River overflows into Merced River Slough bypassing this station on the San Joaquin River. The maximum discharge of record (34,700 cfs) includes flow in Merced River Slough.

Station located at State Highway 132 Bridge, 13 miles west of Modesto, 2 miles upstream from mouth of the Stanislaus River. Gage height-discharge relation affected by backwater from the Stanislaus River during high flows in the Stanislaus. Flows regulated by upstream reservoirs and diversions. Drainage area is 12,400 square miles.

a This maximum gage height of record does not represent the maximum discharge of record as the station was affected by backwater from the Stanislaus River.

Station located on left bank 9.35 miles upstream from mouth, 0.6 mile northwest of Bacon and Gates Road Junction, 3.7 miles southwest of Ripon. It is possible that backwater from San Joaquin River could affect the stage-discharge relationship. Flow regulated by upstream reservoirs and diversions. Drainage area is 1,094 square miles.

Station located on left bank 20 feet downstream from the Durham Ferry Highway Bridge, 3 miles downstream from the Stanislaus River 3.4 miles northeast of Vernalis. Drainage area is approximately 13,540 square miles. Natural flow of stream affected by storage reservoirs, power developments, ground water withdrawals and diversions for irrigation. Low flows consist mainly of return flow from irrigation. This station is operated under the Federal-State Cooperative Program. Equipped with DWR radio telemeter. The records are furnished by the U. S. Geological Survey.

a Reflects present datum. The gage height of 32.81 feet does not represent the maximum discharge of 79,000 cfs as water was bypassing the station through levee breaks upstream from station.

**APPENDIX C**  
**GROUND WATER MEASUREMENTS**

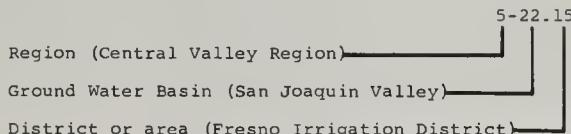

## INTRODUCTION

The Department of Water Resources cooperates with the U. S. Geological Survey, U. S. Bureau of Reclamation, irrigation and water storage districts, and other local agencies for the systematic observation of ground water levels. The Department obtains approximately 13,000 water level measurements annually on some 7,500 wells in the San Joaquin Valley. The period of record for these wells varies from one to over 40 years. In preparation of the ground water maps most of the well measurements were used. However, because significant trends in water level fluctuations can be indicated by a representative sample, a selection was made of approximately 500 wells for reporting of actual measurements.

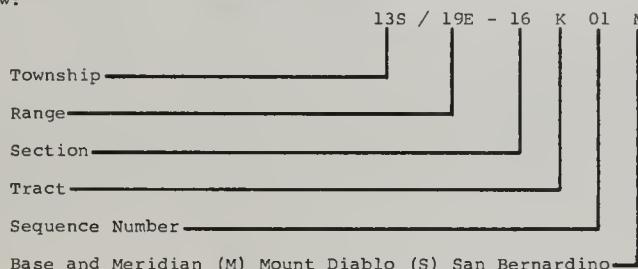

This appendix presents ground water measurement data on these wells for the period October 1, 1973, through September 30, 1974. These wells were selected as being representative of all the wells measured in the area and are designated as selected wells. Their selection is based on a number of factors, including areal distribution, length of water level record, frequency of measurements, conformity with respect to water level fluctuation in the ground water basin or area in a confined aquifer, or in a zone of shallow depth, and availability of a log, mineral analyses, and production record.

Two numbering systems are used by the Department to facilitate processing of water level measurement data. The two systems are the Region and Basin Designation and the State Well Numbering System as described below.

The regions used in this report are geographic areas defined in Section 13040 of the Water Code. That portion of California covered by this volume comprises the southern portion of Central Valley Region No. 5. A decimal system of the form 0-00.00 has been selected according to geographic regions, ground water basins, and district or area as follows:

The State Well Numbering System is based on township, range, and section subdivisions of the Public Land Survey. The number of a well, assigned in accordance with this system, is referred to as the State Well Number, as illustrated below:

This number identifies and locates the well. In the example, the well is in Township 13 South, Range 19 East, Tract K of Section 16, located in the Mount Diablo Base and Meridian. A section is divided into 40-acre tracts as follows:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Sequence numbers in a tract are generally assigned in chronological order. The example designates the first well to be assigned a number in Tract K.

<sup>a</sup>/ Average changes were determined by planimetering ground water contour maps. Where numbers appear changes were computed by numerical averages.

TABLE C-2

CHANGE IN AVERAGE GROUND WATER LEVEL FROM  
1921 TO 1951 AND 1951 TO 1974  
IN 18 GROUND WATER AREAS IN THE SAN JOAQUIN VALLEY

Name of Ground Water Area*	Area in square miles	Irrigation and Other Water Districts Included in the Ground Water Area	Net change in water level 1921-51 <sup>a/</sup> in feet	Net change in water level 1951-74 <sup>b/</sup> in feet
Madera	342.6	Madera Irrigation District and Chowchilla Water District	- 24.1 <sup>c/</sup>	-23.8
Fresno	404.0	Fresno Irrigation District and City of Fresno	- 22.4	-18.8
Consolidated	243.0	Consolidated Irrigation District	- 19.0	+ 3.2
Centerville Bottoms	18.1	-----	+ 1.0	- 2.4
Alta	190.9	Alta Irrigation District	- 17.2 <sup>c/</sup>	+ 7.8
Ivanhoe	17.4	Ivanhoe Irrigation District	- 55.9	+16.4
Outside Ivanhoe	76.6	Stone Corral Irrigation District and a portion of Alta Irrigation District	- 28.5	+ 5.6
Mill Creek	128.2	Portions of Kings County Water District and Kaweah Delta Water Conservation District	- 31.1	-11.7
Tulare	121.1	Tulare Irrigation District	- 59.1	+ 7.0
Elk Bayou	67.6	Portion of Kaweah Delta Water Conservation District	- 47.8	+ 4.5
Lindsay-Exeter	136.4	Exeter Irrigation District, Lindsay-Strathmore Irrigation District, and Lindmore Irrigation District	- 77.7	+79.6
Tule River	156.6	Porterville Irrigation District, portions of Lower Tule River Irrigation District, and Saucelito Irrigation District	- 62.5	+40.7
Lower Deer Creek	162.2	Portions of Lower Tule River Irrigation District, Saucelito Irrigation District, and Delano-Earlimart Irrigation District	-106.7	-24.1 <sup>e/</sup> -10.2 <sup>f/</sup>
Middle Deer Creek	54.3	Terra Bella Irrigation District	- 61.8	+ 2.6 <sup>e/</sup> -40.6 <sup>f/</sup>
Delano-Earlimart	140.0	Portions of Delano-Earlimart Irrigation District and Southern San Joaquin Municipal Utility District	-133.8	+30.7 <sup>e/</sup> +23.8 <sup>g/</sup>
McFarland-Shafter	306.0	North Kern Water Storage District, Shafter-Wasco Irrigation District, and a portion of Southern San Joaquin Municipal Utility District	- 99.0	-16.1 <sup>e/</sup> -42.9 <sup>g/</sup>
Rosedale	78.9	-----	- 36.3	-52.9 -21.7 <sup>g/</sup>
Arvin-Edison	205.2	Arvin-Edison Water Storage District	- 69.9 <sup>d/</sup>	-45.4 <sup>g/</sup>

<sup>a/</sup> 1951 was the first year of substantial deliveries from the Friant-Kern Canal.

<sup>b/</sup> Fall 1951 to spring 1974.

<sup>c/</sup> Fall 1929 to fall 1951.

<sup>d/</sup> Fall 1941 to fall 1951.

<sup>e/</sup> Unconfined aquifer, spring 1961 to spring 1974; only one aquifer reported prior to 1961.

<sup>f/</sup> Change shown for 1951 to 1971; insufficient data in pressure aquifer to compute changes for 1971-74.

<sup>g/</sup> Pressure surface, spring 1961 to spring 1974; only one aquifer reported prior to 1961.

\* These areas are shown on Plate 2.

TABLE C-3  
GROUND WATER LEVELS AT WELLS

An explanation of the column headings and the code symbols follows:

State Well Number--refer to the explanation under Introduction, page 123.

Aquifer--Qualifications are based on the latest geologic knowledge of the aquifer system and construction of individual wells. The code symbols are as follows:

- |   |  |   |  |
|---|--|---|--|
| 0 | Unqualified due to lack of well construction and/or geology information. | 4 | Unconfined, outside Corcoran Clay area.                                    |
| 1 | Unconfined, perforated above the Corcoran Clay.                          | 5 | Confined, aquitard other than Corcoran Clay.                               |
| 2 | Confined, perforated below the Corcoran Clay.                            | 6 | Composite, perforated above and below aquitard outside Corcoran Clay area. |
| 3 | Composite, perforated above and below the Corcoran Clay.                 |   |  |

Ground surface elevation represents the elevation in feet above mean sea level (U.S.G.S. and U.S.C. & G.S. datum) of the ground surface at the well. Elevations are usually taken from topographic maps and the accuracy is controlled by topographic standards.

Date is the date the depth measurement was made. Where 00 appears in the date, day of measurement is unknown.

Ground surface to water surface in feet is the measured depth in feet from the ground surface to the water surface in the well.

Other code symbols used in this column are as follows:

NO MEASUREMENT (NM)		
0	Measurement discontinued	5
1	Pumping	6
2	Pump house locked	7
3	Tape hung up	8
4	Can't get tape in casing	9

The words FLOW and DRY are shown in this column to indicate a flowing or dry well.

Water surface elevation is the elevation in feet above mean sea level (U.S.G.S. and U.S.C. & G.S. datum) of the water surface in the well. It was derived by machine computation by subtraction of the depth measurement from the reference point elevation.

Agency supplying data represents the code numbers for the agencies supplying water level data.

In this list of water levels, the agency furnishing the measurement is noted. The agencies and code numbers assigned to them are as follows:

<u>Agency Code</u>	<u>Agency</u>	<u>Agency Code</u>	<u>Agency</u>
5000	U. S. Geological Survey	5603	Kaweah Delta Water Conservation District
5001	U. S. Bureau of Reclamation	5604	Tulare Irrigation District

**APPENDIX D**  
**SURFACE WATER QUALITY**

APPENDIX D  
SURFACE WATER QUALITY

Introduction

Appendix D summarizes the surface water quality for the San Joaquin Valley for 1974 water year (October 1, 1973, through September 30, 1974). These data were obtained from 81 surface water quality sampling stations.

Laboratory analyses of surface water samples performed by the Department of Water Resources' laboratory reported herein are in accordance with the 13th edition of "Standard Methods for the Examination of Water and Waste Water".

Each station in this appendix has been assigned an eight digit identification number. The first two digits denote the drainage basin as shown below; the remaining digits identify each station.

<u>Hydrographic Area B</u> <u>San Joaquin River Basin</u>		<u>Hydrographic Area C</u> <u>Tulare Lake Drainage Basin</u>	
B0	San Joaquin Valley Floor	C0	Tulare Lake Valley Floor
B3	Stanislaus River	C1	Kings River
B4	Tuolumne River	C2	Kaweah River
B5	Merced River	C3	Tule River
B6	Fresno-Chowchilla Rivers	C4	Greenhorn Mountains
B7	San Joaquin River	C5	Kern River
B8	San Joaquin Valley on West Side	C6	Tehachapi Mountains
		C7	Tulare Lake Basin on West Side

a. Location of sampling stations is shown on Figure B-1.

b. Beginning of record ( -- indicates an irregular period of record).

c. M - Monthly, Q - Quarterly, S - Semiannually, all others irregular.

d. DWR - Dept. of Water Resources, USGS - U. S. Geological Survey.

TABLE D-2  
MINERAL ANALYSES OF SURFACE WATER

This table presents analyses performed by the Department of Water Resources' Bryte Laboratory the U. S. Geological Survey's Salt Lake City laboratory.

The sampler and laboratory codes are as follows:

5000 U. S. Geological Survey

5050 Department of Water Resources

5647 Tehachapi-Cummings Water District

Definitions of chemical symbols and abbreviations used in this table are as follows:

Chemical Symbols

CA	Calcium	SO <sub>4</sub>	Sulfate
MG	Magnesium	CL	Chloride
NA	Sodium	NO <sub>3</sub>	Nitrate
K	Potassium	F	Fluoride
CO <sub>3</sub>	Carbonate	B	Boron
HCO <sub>3</sub>	Bicarbonate	SiO <sub>2</sub>	Silica

Abbreviations

TEMP	Temperature	DO	Dissolved Oxygen
SAT	Percent Saturation	GH	Gage Height
Q	Flow	FLD	Field Determination
LAB	Laboratory	EC	Specific Electrical Conductance in Micromhos
pH	Measurement of Acidity or Alkalinity of Water	TDS	Total Dissolved Solids
SUM	Summation of Analyzed Constituents	TH	Total Hardness
NCH	Noncarbonate Hardness	TURB	Turbidity in Turbidity Units
SAR	Sodium Adsorption Ratio		
REM	Remarks as follows:		

T Total Dissolved Solids and the calculated sum of constituents are not within 20 percent of each other.

E Total Dissolved Solids value is not within the range of 0.35 to 0.70 of the Specific Electrical Conductance.

S The anion and cation sums are not within the prescribed tolerance of  $\pm 5$  percent.

X The field EC and the laboratory EC are not within 20 percent of each other.

TABLE D-3  
MINOR ELEMENT ANALYSES OF SURFACE WATER

Table D-3 presents minor element analyses performed by the Department of Water Resources' laboratory and the U. S. Geological Survey's laboratory.

The sampler and laboratory codes are as follows:

5000 U. S. Geological Survey

5050 Department of Water Resources

Values followed by "D" represent dissolved concentrations. All others represent total concentrations.

TABLE D-4  
SUPPLEMENTAL MINOR ELEMENT ANALYSES OF SURFACE WATER

Table D-4 presents supplemental minor element analyses performed by the Department of Water Resources' laboratory and the U. S. Geological Survey's laboratory.

The sampler and laboratory codes are as follows:

5000 U. S. Geological Survey

5050 Department of Water Resources

Values followed by "D" represent dissolved concentrations. All others represent total concentrations.

TABLE D-5  
MISCELLANEOUS CONSTITUENTS OF SURFACE WATER

Table D-5 presents data not included in Tables D-2, D-3, D-4, D-6, and D-7. Definitions of abbreviations used in this table are as follows:

Abbreviations

BOD	Biochemical Oxygen Demand (B = 5 day at 20° C)
COD	Chemical Oxygen Demand
SUSS	Suspended Solids at (S = 105° C)
VSUSS	Volatile
TOC	Total Organic Carbon
LAB	Laboratory
	5000 U. S. Geological Survey
	5050 Department of Water Resources

TABLE D-5

TABLE D-6

## Nutrient Constituents of Surface Water

Table D-6 presents analyses which do not appear on Tables D-2, D-3, D-4, D-5, and D-7. Definitions of abbreviations used in this table are as follows:

Abbreviations

EC	Specific Electrical Conductance in Micromhos
TURB	Turbidity in Turbidity Units
HCO <sub>3</sub>	Bicarbonate
CO <sub>3</sub>	Carbonate
pH	Measurement of Acidity or Alkalinity of Water
NO <sub>2</sub>	Nitrite as N
NO <sub>3</sub>	Nitrate as N
NH <sub>3</sub>	Ammonia as N
OrgN	Organic Nitrogen
NH <sub>3</sub> + OrgN	Ammonia plus Organic Nitrogen as N (total Kjeldahl)
F PO <sub>4</sub>	Dissolved Orthophosphate as P
U PO <sub>4</sub>	Total Orthophosphate as P
U TOTP	Total Phosphate as P

## MINERAL ANALYSES OF GROUND WATER QUALITY

This table presents data resulting from the collection and analyses of ground water by various agencies and laboratories cooperating with this program. The code numbers listed below will identify these program cooperators as they appear in this tabulation:

- 5050 California Department of Water Resources
- 5060 California Department of Health
- 5119 Kern County Health Department
- 5121 Kern County Water Agency
- 5129 Kings County Water District
- 5205 City of Delano
- 5647 Tehachapi-Cummings Water District
- 5701 California Water Service Company
- 5702 Individual Owner
- 5703 Valley Waste Disposal Company
- 5720 Bakeman Water Company
- 5801 Braun, Skaggs, Kevorkian and Simons Laboratory
- 5802 Twining Laboratory
- 5803 Hornkohl Laboratory
- 5806 B. C. Laboratory
- 5819 Brown and Caldwell Laboratory

### Chemical Symbols

B	Boron	K	Potassium
CA	Calcium	Mg	Magnesium
Cl	Chloride	NA	Sodium
CO <sub>3</sub>	Carbonate	NO <sub>3</sub>	Nitrate
F	Fluoride	SiO <sub>2</sub>	Silica
HCO <sub>3</sub>	Bicarbonate	SO <sub>4</sub>	Sulfate

### Abbreviations

EC	Specific Electrical Conductance	TEMP	Water Temperature at Time of Field Sampling
NCH	Non-Carbonate Hardness	F	Fahrenheit
SAR	Sodium Adsorption Ratio	C	Celsius
SUM	Sum of Mineral Constituents	TIME	Pacific Standard Time on a 24-Hour Clock
TH	Total Hardness	PH	Measure of Acidity or Alkalinity
TDS	Total Dissolved Solids	TURB	Turbidity in Turbidity Units
REM	Remarks as follows:		

- T Indicates the TDS does not fall within 20 percent of the calculated SUM of the constituents.
- E Indicates the TDS value is not within the range of 0.35 to 0.70 of the lab electrical conductivity.
- S Indicates the anion sum and cation sum for a complete analysis are not within the prescribed tolerance of  $\pm 5$  percent.
- C Indicates the lab electrical conductivity divided by the EC-EPM factor (or if absent, 100) is not within 20 percent of the average of the cation sum and anion sum for a complete analysis.
- X Indicates the field electrical conductivity and the lab electrical conductivity are not within 20 percent of each other.

## INTRODUCTION

Appendix E summarizes the ground water quality data for the San Joaquin Valley for the ~~1973~~<sup>1974</sup> water year (October 1, ~~1973~~<sup>1974</sup>, through September 30, ~~1973~~<sup>1974</sup>). These data were obtained from analyses of water samples from approximately 500 wells.

Laboratory analyses of ground water samples reported herein were performed in accordance with the 13th Edition of "Standard Methods for Examination of Water and Waste Water".

A complete description of the State Well Numbering System, used in this report to indicate the location of the wells sampled, is contained in Appendix C, "Ground Water Data", page 123. A 40-acre tract may contain a well that has not been assigned a state number or may have a well that is of a temporary nature. These are numbered in the 80 series; i.e., 15S/22E-27K80M.

TABLE E-2  
MINOR ELEMENT ANALYSES OF GROUND WATER

This table presents data resulting from the collection and analyses of ground water by various agencies and laboratories. The code numbers listed below will identify the agency that collected the sample and the laboratory that conducted the analysis:

5050	California Department of Water Resources
5060	California Department of Health
5119	Kern County Health Department
5121	Kern County Water Agency
5123	Tulare County Farm Advisor
5200	City of Fresno
5205	City of Delano
5701	California Water Service Company
5702	Individual Owner
5720	Bakeman Water Company
5801	Braun, Skaggs, Kevorkian and Simons Laboratory
5802	Twining Laboratory
5806	B. C. Laboratory

Abbreviations

D	Dissolved
T	Total
REM	Remarks
